Commentary

The report indicates that the business ledger data is largely complete, with most columns fully populated. The "Upstream Transaction ID" column is the least complete, with only 4,360 rows populated and 5,420 rows missing, resulting in a 44.60% completion rate. All other columns, such as "Account," "Sub Branch," and "Cashflow Type," are fully populated with 9,780 entries each. The operations team should focus on addressing the missing data in the "Upstream Transaction ID" column to improve overall data completeness.

% populated is a percentage and cannot share an axis with the amounts, so it is in the table only.

Only the largest 14 categories are charted; the remainder are combined into a single 'Other' bar. The full breakdown is in the table.
