Commentary

The report provides a comparison of total ledger flow by sub branch, highlighting each desk's share of the total. The sub branch BRYG has the most significant negative ledger flow, amounting to -244,140,158,034.87, which constitutes 43.85% of the gross amount. In contrast, BRBX shows the highest positive ledger flow at 72,533,247,792.61, representing 13.03% of the total. The substantial negative flow in BRYG is a notable outlier and should be examined further by the operations team.

% of gross Amount (Display) is a percentage and cannot share an axis with the amounts, so it is in the table only.

Limitations of this view

- Shares are calculated on gross flow because the figures include both debits and credits: as a share of the net total they would exceed 100% and could be negative.
- The view is scoped to the value date range from 2026-07-20 to 2026-08-18.
- The amounts are translated using static synthetic FX rates to GBP.
- This is synthetic, non-production data.
